

## **Product description**

Plastic drip tray with a capacity of 30 liters and galvanized grid. This drip tray is ideal for the workshop due to its height of only 85 mm and length of 980 mm.

Guideline for storage and temporary storage for drip trays with regard to fire safety, occupational safety and environmental safety according to PGS 15 (publication series hazardous substances):

A storage facility must be constructed in such a way that leaked or spilled hazardous liquid is collected in a container. To this end, the collection container must have a capacity of at least 110% of the largest package. However, if 10% of the total content of the packages is more than 110% of the content of the largest package, then the collection capacity must be equal to 10% of the total content of the packages together. The collection container must be sufficiently resistant to the stored liquids.

The collection capacity only applies to liquids. Empty, uncleaned packaging does not count. The collection facility may also be realized in storage. The choice of location for the collection facility may depend on the hazardous liquids stored. Kruizinga.nl is not liable for the type of use!

Please note! Any form of modification is not allowed. If this is the case, all regulations will lapse.

## Specifications

Article arrangement: New Version: plastic floor part Floor: with galvanized grid Colour: black Width (mm): 600 Loading capacity (kg): 50 Weight (kg) 10 EAN Code (Gtin) 8719424005936
