Product description

A new Euronorm 800x600 mm wooden pallet top-up edge is a standardized pallet format widely used in the logistics sector. This top-up edge (20 mm thick) is specifically designed to add extra height to a standard pallet, making it possible to stack more goods on the pallet without the risk of damage or instability. The add-on edges are designed to stack safely on top of each other. This maximizes storage space and facilitates transportation. TÜV certification indicates that the pallet add-on edge meets the technical standards and quality requirements set by TÜV Rheinland. In addition, the pallet attachment edge is "Heat Treated". Performing this Heat Treatment kills all harmful organisms. Wood that undergoes Heat Treatment meets the ISPM15 requirement. ISPM15 applies to solid wood packaging used to support, protect or transport goods. This makes the attachment edge suitable for international transport. Are you temporarily not using the collars? The hinge system makes it possible to fold the top rim, saving significantly on storage capacity. This is especially beneficial in warehouses, distribution centers or other storage facilities where space optimization is critical. See also below lockable lid, compartments, label holders, attachments, undercarriages for even more possibilities.

Also available as a pallet offer.

Specifications

Article arrangement: New

Version: 4x hingeable

Euronorm (mm): 800 x 600

Width (mm): 600

Options: TÜV certified

EAN Code (Gtin) 8719424087185

Type: hingeable construction stackable TÜV

Material: wooden and steel corners

Length (mm): 800

Height (mm): 195

Type number: 0172
